

# **STM32 course**

Back to definitions and jump-start to the RCC and  
GPIO

Moscow Institute Of Physics and Technology

# A few words about previous lecture

- Cortex-M0 core
  - Diagram
  - Core registers
  - Exceptions and interrupts
  - Memory Map
  - NVIC
- Toolchain
- A bit practice

# Today's outline

- Main concept of digital electronics
- Definitions
- SysTick
- STM32F0 SoC overview
- GPIO

# Main concept of digital electronics

- Based on transistors
- Two types of digital logic
  - Combinational logic
  - Sequential logic

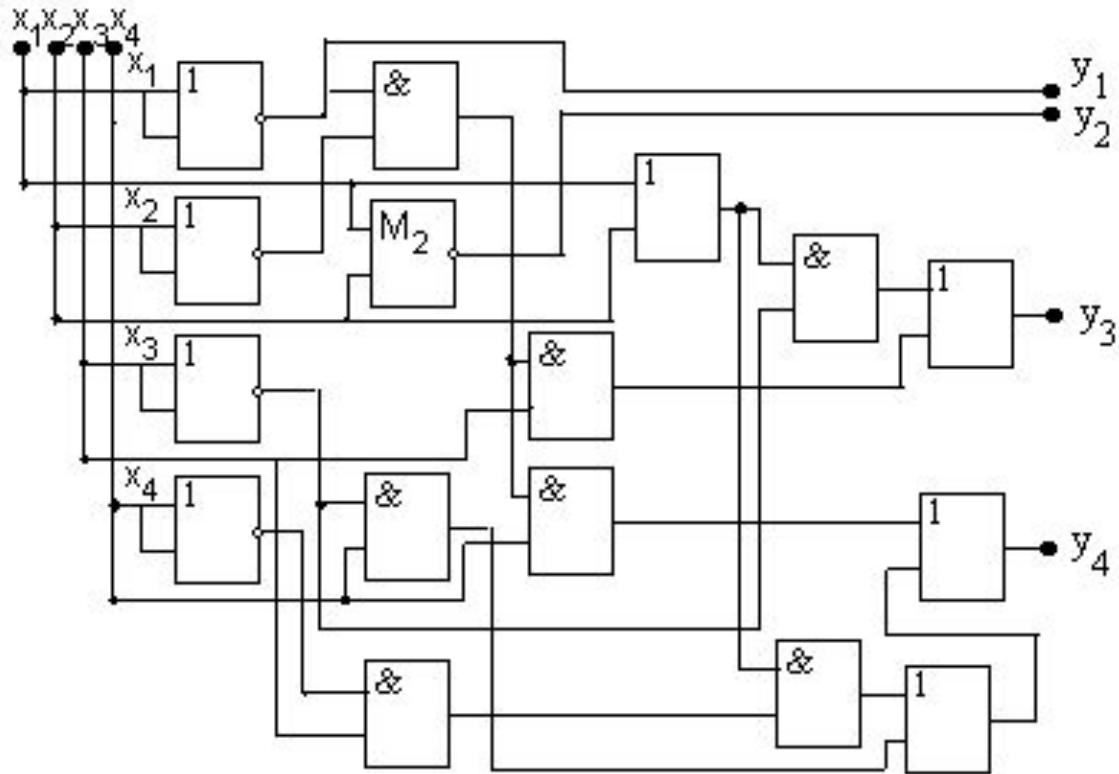

# Combinational logic

- Also referred to as time-independent logic
- Implemented by Boolean circuits, where the output is a pure function of the present input only

<i>A</i>	<i>B</i>	<i>C</i>	Result	Logical equivalent
F	F	F	F	$\neg A \cdot \neg B \cdot \neg C$
F	F	T	F	$\neg A \cdot \neg B \cdot C$
F	T	F	F	$\neg A \cdot B \cdot \neg C$
F	T	T	F	$\neg A \cdot B \cdot C$
T	F	F	T	$A \cdot \neg B \cdot \neg C$
T	F	T	F	$A \cdot \neg B \cdot C$
T	T	F	F	$A \cdot B \cdot \neg C$
T	T	T	T	$A \cdot B \cdot C$

# Combinational logic

# Sequential logic

- logic circuit whose output depends not only on the present value of its input signals but on the sequence of past inputs, the input history
- Needs a clock signal to work
- The basic memory element in sequential logic is the flip-flop

# Sequential logic

# Sequential logic

# Sequential logic

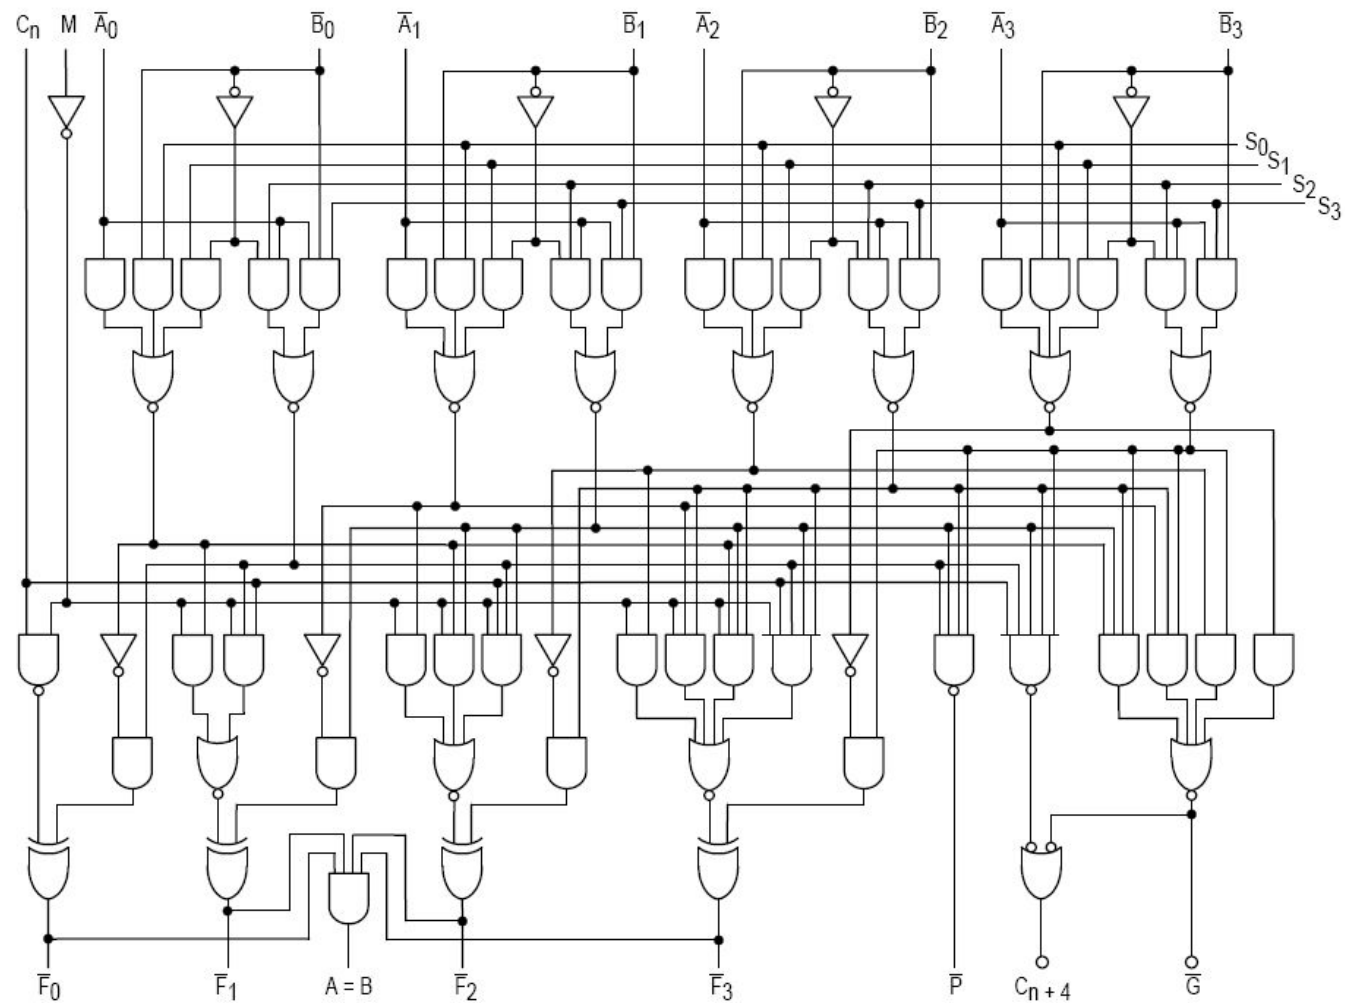

# Register

- Composed of flip flops
- Stores data throughout the one period of clock

# Arithmetic logic unit

# System timer

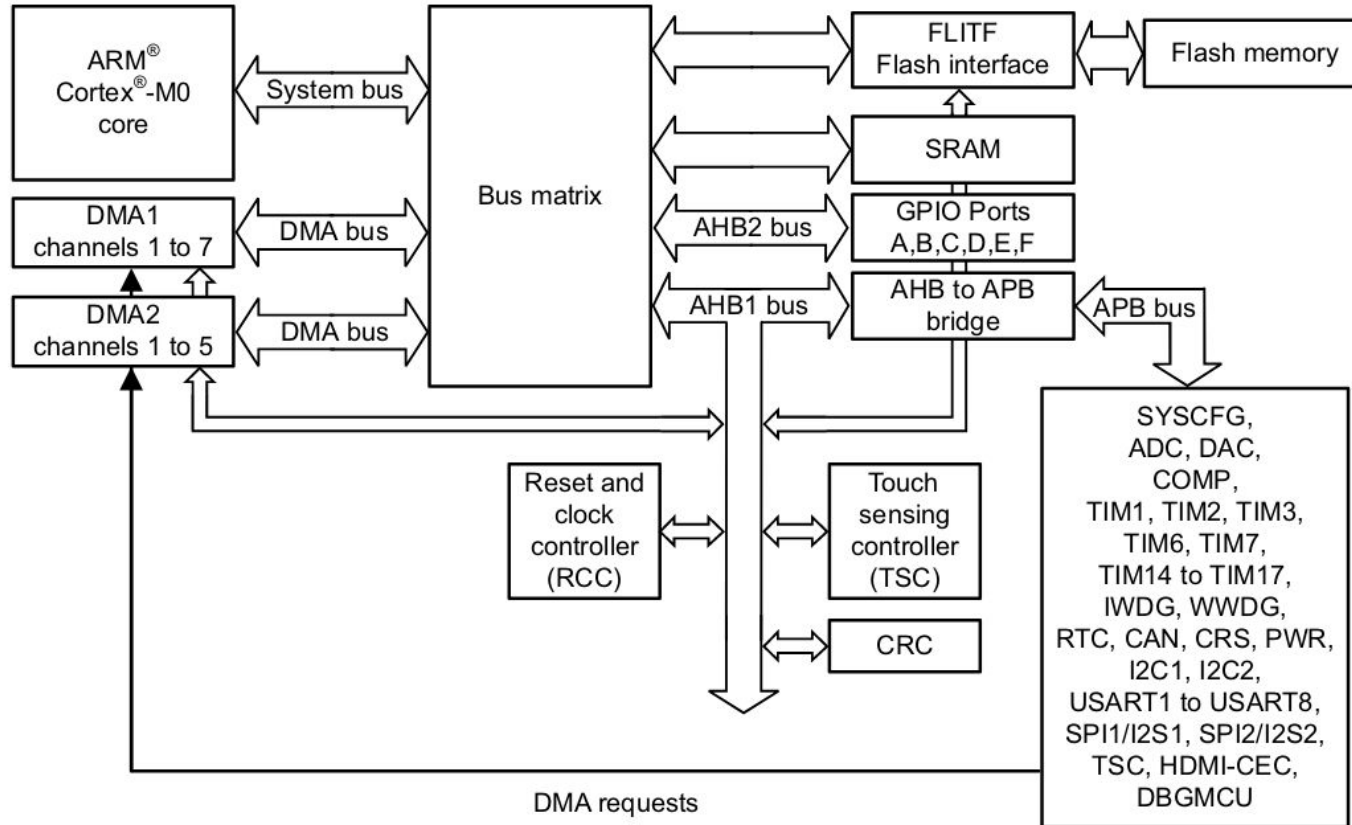

When enabled, the timer:

- Counts down from the reload value to zero,
- Reloads the value in the STK\_RVR on the next clock cycle
- then decrements on subsequent clock cycles.

# System timer

- SysTick control and status register (STK\_CSR)
  - COUNTFLAG (returns 1 if counted to 0, since read)
  - CLKSOURCE (0 - ext, 1 - clk)
  - TICKINT (turn on/off exception)
  - ENABLE
- SysTick reload value register (STK\_RVR) (start value)
- SysTick current value register (STK\_CVR)
- SysTick calibration value register (STK\_CALIB)

# STM32F0 SoC overview

# **GPIO (General purpose input/output)**

**Let's switch to Reference Manual!**
